

ANALYTICAL TABLE OF COINS

The following analysis of 10,479 coins from the Agora Excavations, that had been identified and catalogued by July 1, 1935, has been compiled from the work of various members of the Coin Department. Special acknowledgment is made to Miss Katharine Edwards for suggestions and assistance in the accumulation of the data.

¹ The chronological arrangement of the Athenian bronze coins up to the period of the New Style is based on a careful study of the style and peculiarities of the coins themselves combined with valuable evidence from closed deposits of coins which the excavations have furnished. I am especially indebted to Mr. E. S. G. Robinson of the British Museum for his valuable assistance in the study of the particular chronology. All references are to Svoronos, *Trésor des Monnaies d'Athènes*, unless otherwise stated.

¹ From the Anonymous Byzantine and Allied Coinages, numbering 542, found in the excavations, a careful study of the striking and restriking has necessitated the following rearrangement of Bellinger's classes (*Numismatic Notes and Monographs*, no. 35). The cumulative evidence derived from this reexamination will be published in *Hesperia* in the near future.
