THE EARLIEST ATHENIAN NEW STYLE BRONZE COINS. SOME EVIDENCE FROM THE ATHENIAN AGORA*

(Plates 75, 76)

In the course of the 2nd century B.C., the Athenian Agora was the site of extensive building activity. The most dramatic reshaping of the area took place on the east and south sides. There, the Square Peristyle erected around 325 B.C., probably to house the law courts, and a later, small brick building at the southeast corner of the Peristyle, were demolished. Also torn down were the late 5th century South Stoa I, built, at least in part, to provide offices and dining rooms for magistrates and boards of officials, and several small buildings of the 5th and 4th centuries south of the Tholos.¹ In their place were erected three great stoas. The earliest, the so-called Middle Stoa,² was begun in the second decade of the 2nd century and was of enormous size for its date (146 m. long). About three decades later, during the first part of the reign of Attalos II (159–139 B.C.), the Stoa of Attalos³ was built perpendicular to the Middle Stoa. The new stoa was shorter than its predecessor (116 m.) but had two storeys and a marble façade. Finally, South Stoa II⁴ was erected, somewhat later than the Stoa of Attalos and the East Building which connected the South and Middle Stoas, and completed the South Square which now formed an adjunct to the main square to the north.

The early 2nd century date of the Middle Stoa and the fixed relative sequence of the three Hellenistic stoas are of great potential value to the numismatist, who can,

* In preparing this study, I benefited greatly from consultations with several present and former members of the Agora staff who gave generously of their time and *expertise*. They are acknowledged individually in the following notes. Above all, I am indebted to John H. Kroll, my predecessor as Agora numismatist, who provided advice and encouragement at every stage of my work. Dates suggested for the bronze coinage of Athens in the 4th and 3rd centuries B.C. are based on Dr. Kroll's unpublished study of these early issues.

The following abbreviations are used: AE = bronze. AR = silver. AV = gold. Agora, XIV = H. A. Thompson and R. E. Wycherley, The Athenian Agora, XIV, The Agora of Athens, Princeton, 1972. BMC = A Catalogue of the Greek Coins in the British Museum, London, 1873ff. McClean = S. W. Grose, Catalogue of the McClean Collection of Greek Coins, Cambridge, Fitzwilliam Museum, 1923–1929. Sv. = J. N. Svoronos, Les monnaies d'Athènes, Munich, 1923–1926. References to this work are exclusively to plates; Sv.— indicates type was not illustrated.

In the catalogues given below, all coins are AE unless otherwise stated. Specimens illustrated on Plates 75 and 76 are indicated by an asterisk.

Hesperia, XLIV, 3

by studying the coins found in the construction fills of the three buildings and related deposits, attempt to shed some light on the bronze coinage of Athens in the 2nd century B.C. Foremost among the outstanding questions regarding this coinage is the date of introduction of the "New Style" bronze types Athena/Fulminating Zeus. The establishment of a relative sequence for the 2nd century Fulminating Zeus and fractional issues is also important, for the archaeologist as well as the numismatist. In this respect, the material from the three stoas is no less significant for what it does not contain than for what it does contain.

THE MIDDLE STOA: THE NUMISMATIC EVIDENCE

The Middle Stoa⁵ was the first element in the reorganization of the south part of the Agora. The building, which may have been a royal gift to Athens, had unfluted Doric columns on all four sides and was accessible both from the main square and from the south. The stoa was constructed almost entirely of poros from Aigina. Marble was restricted to the south gutter and the metopes, and the floors were of clay. Work on the building was begun at the east end and proceeded westward. The last two bays of the west end were not erected until the main part of the stoa was completed, thereby allowing the old buildings to the west to continue in use as long as possible.⁶

In the course of the excavations of 1933, 1935 and 1953–1954, a vast amount of construction fill for the Middle Stoa was uncovered, including great quantities of pottery, stamped amphora handles and coins. The date at which this fill was closed may be placed around 180 B.C. on the evidence of the amphora stamps, which do not include any varieties datable after 183 or 182 B.C.⁷

The coins catalogued below (Deposit I) are those which were found in areas of the building and north-terrace fill which the excavators regarded as undisturbed and in the

⁵ Agora, XIV, pp. 66–68, 103–104.

⁶ The numismatic finds do not, however, substantiate a later date for the construction fill of the west end of the stoa. The latest coins from the west end of the building fill are similar in character to those from the remainder of the fill: Sv. 81.17–18, Θ-639 (east), $M\Sigma$ -230 (west); Sv. 81.28–29, Θ-286, $M\Sigma$ -316 (east); Sv.—, Θ-641, $M\Sigma$ -14 (east), Θ-148, Θ-155 (west); Sv. 107.55–69, $M\Sigma$ -73 (east), Θ-714 (west); BMC, Thessaly, 62–67, Θ-242 (east). See, however, the remarks, below, p. 330, on a period of inactivity at the Athenian mint and the group of coins, below, p. 311, from an area of the Hellenistic fill south of the Middle Stoa, possibly connected with the completion of the west end of the building (Deposit III).

⁷ V. R. Grace, "Les timbres amphoriques grecs," Exploration archéologique de Délos, XXVII, Paris, 1970, p. 291: "The end date of the [amphora] stamps of the Middle Stoa filling should therefore be set 7 years earlier than that of the Pergamon group; on present estimate, then, 183 or 182 B.C." Cf. also p. 320. Grace, "Stamped Handles of Commercial Amphoras," Excavations at Nessana, I, London, 1962, p. 124. I am grateful to Miss Grace for reviewing the amphora stamp evidence with me.

drains and layers which were older than the 2nd century structure.⁸ 152 coins were securely identifiable after cleaning.⁹

⁸ The undisturbed areas of the fill were excavated in 1933 and 1953–1954 by Dorothy B. Thompson and in 1935 by Arthur W. Parsons. I am indebted to Mrs. Thompson and to Prof. Homer A. Thompson for reviewing the field notebooks with me and helping to assemble the list of relevant coins.

⁹ The entire deposit of 441 coins consists of the following 366 coins with inventory numbers, 46 of which disintegrated after discovery: Θ-148, 155, 186, 187, 240–242, 250, 262–274, 285, 286, 311, 314, 328, 329, 335, 336, 395–400, 633–635, 637, 639–642, 649, 663, 668, 674–677, 699–700, 713, 714; Λ-410–414, 417; ΜΣ-1, 4, 10–14, 17–26, 28–36, 38–40, 47–59, 66–82, 85–88, 93, 94, 105, 114–116, 121–124, 197–201, 204, 208–222, 226–253, 258–263, 265–270, 284–286, 288, 301–319, 356–370, 377, 380–384, 390–392, 395, 396, 402, 403, 405, 407–419, 421, 423, 424, 426–429, 433, 437–441, 443–457, 460–476, 492–497, 504–510, 624–626, 647–653, 656–695. An additional 75 AE coins, without inventory numbers, are missing. Almost all of these had been identified during the early excavations as "Athens, 3rd century B.C.," "Greek," "Illegible" or "Disintegrated" and were subsequently discarded. The designation "Athens, 3rd century B.C." was given to coins which were similar in size and fabric to 3rd century Athenian AE; today they would be classified as "Greek" or "Illegible".

The group of coins catalogued below (Deposit III) was found in the Hellenistic fill south of the Middle Stoa near the northwest corner of the Heliaia.¹³ This fill contained material later in date than that which made up the building fill proper (Deposit I) and the bulk of the Hellenistic fill south of the Stoa (Deposit II). A small group of stamped amphora handles was also uncovered in this area. The stamps post-date those in Deposits I and II and are possibly as late as the early third quarter of the 2nd century B.C., i.e., ca. 140 B.C.¹⁴ Deposit III therefore documents later activity in the area immediately south of the Middle Stoa, perhaps in connection with the completion of the west end of the building. 14 coins from this group were securely identifiable after cleaning.¹⁵

THE STOA OF ATTALOS: THE NUMISMATIC EVIDENCE

The Stoa of Attalos¹⁶ was a gift to Athens from Attalos II, king of Pergamon, 159–138 B.C. The building had two storeys with a row of 21 shops behind the colonnade on each level. Pentelic marble was employed for the columnar façade and the interior trim; the walls were of poros from Peiraieus. The 45 main columns of the ground floor were of the Doric order and were unfluted in their lower parts. The interior colonnade consisted of 22 entirely unfluted Ionic columns. The upper outer colonnade comprised 45 fluted double Ionic half columns with a marble balustrade between them. The inner columns of the second storey were unfluted and had

¹⁶ Agora, XIV, pp. 104–107. H. A. Thompson, The Stoa of Attalos II in Athens, Picture Book No. 2, Princeton, 1959.

Egyptian palm capitals. In its final form, the Stoa of Attalos was 116 m. long and 20 m. deep, but the original plan called for three fewer shops on each level. The change in design necessitated two successive extensions of the northern terrace of the building during the construction of the foundations.

The Stoa of Attalos cannot have been built prior to 159 B.C., the year of Attalos II's accession to the Pergamene throne, since the dedicatory inscription of the building names Attalos as king. Construction of the building was probably begun about 150 B.C. and almost certainly before 146 B.C. The construction fill of the building excavated by the American School in 1933, 1936, and 1949–1954 did not contain any long-petal Megarian bowls, a variety introduced at Corinth just before the destruction of the city in 146 B.C.¹⁷ The fill did contain, however, a series of stamped amphora handles of the period 182–146 B.C., including 31 Knidian eponyms not present in the construction fill of the Middle Stoa (Deposits I and II).¹⁸

The excavation of two earlier buildings beneath the Stoa of Attalos also produced numismatic evidence relevant to this study. The remains of the older of the two structures, the Square Peristyle, ¹⁹ lay beneath the north end of the 2nd century stoa. The building, which housed the Athenian law courts but was never completed, had a square central courtyard bordered on all four sides by colonnades. It had earthen floors and brick walls. The interior Doric peristyle was of hard limestone. Built about 325 B.C., the Square Peristyle went out of use in the early part of the 2nd century B.C. Also buried beneath the Stoa of Attalos are the foundations of a small brick building of uncertain function erected in the first half of the 2nd century B.C. and torn down shortly after its construction. The building consisted of five rooms in a row and was situated at the southeast corner of the Square Peristyle.²⁰

The coins catalogued below (Deposit IV) are those which were found in undisturbed areas of the construction fill of the Stoa of Attalos and those which were associated with the small brick building beneath the Stoa.²¹ 50 coins were securely identifiable after cleaning.²²

¹⁹ *Agora*, XIV, pp. 60–61.

²⁰ Agora, XIV, p. 58, fig. 17.

 $^{^{21}}$ The latter group consists of the following coins: ΣA -5, 7-11 and 16. Seven of the AE coins are missing or disintegrated. The Stoa of Attalos and the buildings beneath it were excavated in 1933 and 1936 by Arthur W. Parsons and in 1949–1954 by Homer A. Thompson and Eugene Vanderpool. Professor Thompson kindly discussed the numismatic finds from these excavations with me.

²² The entire deposit of 120 coins consists of the following 100 coins with inventory numbers, 9 of which disintegrated after discovery: I-1086, 1180, 1334; ΣA -5–16, 39, 50, 58, 61, 62, 77, 78, 103, 108, 126–128, 150, 165, 167, 227–230, 248–250, 264, 265, 267–270, 291–299, 348, 349, 358–365, 379–381, 490–504, 507–526. An additional 20 AE coins, without inventory numbers, are missing. Most of these had been identified during the early excavations as "Greek" or "Disintegrated" and were subsequently discarded.

The six coins catalogued below (Deposit V) constitute a small hoard, perhaps the contents of a lost purse. They were found stuck together, embedded in the earthen floor of the Square Peristyle beneath the fill of the first northern extension of the terrace of the Stoa of Attalos. If the coins were dropped during the construction of the terrace extension and unknowingly stamped into the Square Peristyle floor by a workman, the hoard would be contemporary with or slightly later than Deposit IV, the coins from the main part of the Stoa of Attalos fill, i.e., ca. 150–146 B.C. If, however, the coins were embedded in the floor of the Square Peristyle while that building was still in use, the date of the deposit would be considerably earlier, perhaps ca. 185 B.C., since only two of the three Fulminating Zeus varieties found in Deposits I and II (ca. 180 B.C.) are present in this hoard. All six coins were securely identifiable after cleaning.

SOUTH STOA II: THE NUMISMATIC EVIDENCE

South Stoa II²³ was the final element in the reorganization of the South Square and extended from the Heliaia to the East Building. The new stoa, unlike the Middle Stoa and the Stoa of Attalos, was almost certainly a civic project. It was a one-aisled Doric colonnade 93 m. long and 8.50 m. wide, with clay floors. The material used for the columns, entablature, steps, roof and rear wall facing was largely taken from the Square Peristyle.

The construction fill of South Stoa II contained long-petal Megarian bowls, which were not present in the Stoa of Attalos fill of ca. 150–146 B.C. South Stoa II slightly postdates the Pergamene building; the excavators are inclined to believe that it was begun about 140 B.C.²⁴ A very small number of coins was found during the excavation of the construction fill of South Stoa II in 1953 and 1960. These are catalogued below (Deposit VI). Only nine coins were securely identifiable after cleaning.²⁵

²³ Agora, XIV, pp. 68–69.

²⁴ I am grateful to Professor Thompson for discussing the evidence for dating the building with me.

 $^{^{25}}$ The construction fill was excavated in 1953 by Margaret Crosby and in 1960 by Homer A. Thompson. The entire deposit of 15 coins consists of the following: T-1193–1195, 1204, 1211, 1222–1225, 1532–1533, 1835–1838. The list of 15 coins was assembled from the notes of Miss Crosby and discussions with Professor Thompson.

*268. T-1224 (obv. countermark: gorgoneion)

The predecessor of South Stoa II was South Stoa I,26 built in the latter part of the 5th century B.C. The building was one of the earliest two-aisled stoas with rooms behind. The rooms served as magistrates' offices until the stoa was demolished around 140 B.C. to make way for South Stoa II.

Two deposits of coins associated with South Stoa I are relevant here and considerably augment the scanty numismatic finds from the construction fill of South Stoa

²⁶ Agora, XIV, pp. 74–78.

II (Deposit VI). The first, Deposit VII, catalogued below, consists of those coins which were found in the destruction debris of South Stoa I.²⁷ 66 coins were securely identifiable after cleaning.²⁸

ATHENIAN BRONZE COINAGE IN THE SECOND CENTURY B.C.: EVIDENCE FROM THE AGORA STOAS

The coinage of Athens in the 2nd and 1st centuries B.C. is universally referred to today as "New Style" coinage, a term which owes its origin to a change in the format of the silver coins struck by the Athenian mint during the late Hellenistic period. In contrast to the early "Old Style" silver coins, the new coins were struck on larger, thinner flans and the archaistic head of Athena, standard on the silver obverses since the late 6th century, was replaced by a more "modern" head of Athena Parthenos based on the famous Pheidian statue. The reverse types were also altered. The new coins depicted a larger owl standing on a Panathenaic amphora and bore the names or monograms of monetary magistrates, letters indicating the months of striking, symbols, and other control marks.

The date of the first "New Style" silver coin has been the subject of controversy in recent years. The traditional date of ca. 229 B.C., coincident with the withdrawal of Macedonian garrisons from Athens, has been abandoned in favor of either 196, the date of Flamininus's proclamation of the freedom of the Greek cities, or ca. 164, after the establishment of Delos as a free port under Athenian control. The earlier of the newly proposed dates was put forward by Margaret Thompson in 1961 in her monumental study of the Athenian "New Style" silver. The later date of ca. 164 was maintained by D. M. Lewis in his 1962 review of Thompson's book. No consensus has yet been reached on the question and it is beyond the scope of this study to reopen the discussion here.

It is important to point out that although the term "New Style" has also been applied to the bronze coins of Athens in the 2nd and 1st centuries B.C., its appropriateness is highly questionable. These coins do not differ significantly in fabric or size from the Athenian bronze issues of the 3rd century B.C. and the "New Style" types, Athena Parthenos head/Owl on amphora within wreath, are not adopted for the bronze coins until after 86 B.C.³³ Furthermore, the "New Style" bronze obverses include

³¹ M. Thompson, The New Style Silver Coinage of Athens, Amer. Num. Soc. St., X, New York, 1961. D. M. Lewis, Class. Rev., N.S. XII, 1962, pp. 290-292; idem, "The Chronology of the Athenian New Style Silver," Num. Chron., 1962, pp. 275-300. M. Thompson, "Athens Again," Num. Chron., 1962, pp. 301-333.

³² For recent discussions of the problem, see C. Boehringer, Zur Chronologie mittelhellenistischer Münzserien, 220–160 v. Chr., Antike Münzen u. Geschnittene Steine, V, Berlin, 1972, pp. 22–31, 200–204. H. B. Mattingly, "Some Third Magistrates in the Athenian New Style Coinage," J.H.S., XCI, 1971, pp. 85–93; idem, "Some Problems in Second Century Attic Prosopography," Historia, XX, 1971, pp. 34–43. M. Thompson, The Agrinion Hoard, Num. Notes and Mon. (American Numismatic Society), CLIX, New York, 1968; idem, "Byzantium over Aesillas," Rev. Num., 6th Series, XV, 1973, pp. 54–65.

³³ A. R. Bellinger, Two Hoards of Attic Bronze Coins, Num. Notes and Mon. (American Numismatic Society), XLII, New York, 1930. M. J. Price, "The New-Style Coinage of Athens. Some Evidence from the Bronze Issues," Num. Chron., 7th series, IV, 1964, pp. 27–36. J. H. Kroll, "Two Hoards of First-Century B.C. Athenian Coins," $\Delta \epsilon \lambda \tau$., XXVII, 1972, A', pp. 86–120.

representations of Zeus, Apollo, Artemis and other deities, even a cicada. This dichotomy between the silver and bronze coins regarding types is, in itself, sufficient reason for dissociating the two series and suggesting that the "New Style" silver and the "New Style" bronze may neither have been introduced simultaneously nor have been of identical duration.

There are other differences between the two series which underline the independence of the silver and bronze issues. The complicated system of control marks used for the silver coins is lacking for the bronze. There are no monograms, names or control letters on the bronze reverses although such marks appear on the comparably small flans of the silver drachms and hemidrachms. Although symbols are standard on the bronze and silver coins alike, those which are employed on the bronze are small in number and can rarely be connected with specific silver issues. The evidence of the "New Style" silver coins will therefore be of little value in establishing either a relative or an absolute chronology for the "New Style" bronze. A chronology for the bronze issues will have to be established by other means.³⁴

The earliest of the "New Style" bronze issues, Athena head/Zeus holding thunderbolt (Pl. 75, Nos. 99, 176) and the first two varieties of the Athena head/Fulminating Zeus series, with symbols star and wheat ear, (Pl. 76, Nos. 103, 254, 256, 261, 105, 257, 259) have traditionally been dated to the period 229–197, i.e., contemporary with the first "New Style" silver issues.³⁵ The revisions in the old silver chronology brought about by Thompson's comprehensive study of the coinage and Lewis's proposal of an alternative "low chronology" have led to a tacit acceptance that the bronze chronology must be adjusted accordingly. No one has, however, suggested a specific date for the introduction of the new bronze types, although Thompson has placed the beginning of the "New Style" bronze coinage before 169 at the latest.³⁶ Price has published an early Fulminating Zeus issue from a deposit at Corinth datable to ca. 146 B.C., the year of the city's destruction, thereby providing a firm, if late, terminus ante quem for the beginning of the "New Style" bronze.³⁷

Perhaps the most important result of the foregoing compilation of Agora deposits is the establishment of a *terminus ante quem* of 180 B.C. for the first "New Style" bronze issues, thereby proving that Lewis's low chronology for the silver is not valid for the bronze. In the two Middle Stoa deposits of ca. 180 B.C. (Deposits I and II)

³⁴ Thompson, *New Style* (above, note 31), pp. 525–526 has also emphasized the differences between the "New Style" silver and bronze. Cf. Bellinger, *op. cit.* (above, note 33), p. 12: "It must be confessed that the [bronze] symbols and types and their connection with symbols on the silver coinage are embarrassing."

³⁵ B. C. Head, *BMC*, *Attica*, London, 1888, pp. xxxiiff.; *idem*, *Historia Numorum*², Oxford, 1911, pp. 378ff. J. P. Shear, "The Coins of Athens," *Hesperia*, II, 1933, pp. 258–259 and pl. 7.

³⁶ Thompson, New Style (above, note 31), p. 528.

³⁷ M. J. Price, "Coins from Some Deposits in the South Stoa at Corinth," *Hesperia*, XXXVI, 1967, p. 362.

three varieties of the Fulminating Zeus series are already present: star and eagle, wheat ear and eagle, and cornucopiae and eagle (Pl. 76, Nos. 103, 105, 106, 109).³⁸ That these three varieties are in fact the earliest of the series is confirmed by their scarcity and extreme wear in Sullan deposits of *ca*. 87 B.C.³⁹ In the Middle Stoa deposits, the determination of relative wear is difficult because of the corroded condition of the bronzes,⁴⁰ but several Fulminating Zeus coins seem to be recently struck pieces in fresh condition, while others show only moderate wear. It is doubtful if any of the Middle Stoa Fulminating Zeus coins were in circulation more than ten or twenty years before being deposited. Thompson's date of 196 for the first "New Style" tetradrachm is therefore suitable for the first Fulminating Zeus bronze coin.

A second result of this inquiry is the establishment that the Cicada/Amphora fractional bronzes, (Pl. 76, Nos. 247, 323), traditionally described as "Delian cleruchy issues" and dated to the period after 164,⁴¹ were struck for use in Attica as well as in Delos,⁴² and must have been issued before 180 B.C. These coins are in good condition in Deposits I and II and represent the fractional denomination struck by the Athenian mint after 196 to accompany the early Fulminating Zeus bronzes. The Cicada/Amphora types are not present in any of the Sullan hoards published by Price.⁴³

Earlier than the Fulminating Zeus and Cicada/Amphora types, and datable to the very end of the 3rd century, is the bronze series of Athena head/Zeus holding thunderbolt (Pl. 75, Nos. 99, 176).⁴⁴ These coins show little-to-moderate wear in Middle Stoa Deposits I and II. The obverses of this series document the transition from the 3rd century Attic-helmet type to the Corinthian helmet worn by Athena on the "New Style" Fulminating Zeus bronzes. The fractional denominations which accompany the Zeus-holding-thunderbolt types are undoubtedly the Athena head/Owl on prow and Athena head/Owl on thunderbolt varieties (Pl. 75, Nos. 198, 237, 311, 199).⁴⁵ These types are comparably well preserved in the Middle Stoa deposits and also reveal a transition from the Attic to the Corinthian helmet on the obverses. The types are appropriate as fractional counterparts of the Zeus-holding-thunderbolt series: both the owl and prow appear as symbols on the large bronzes and the thunderbolt echoes the attribute of Zeus.

³⁸ Sv. 81.17–18 (star), 81.28–29 (wheat ear). The cornucopiae variety was not recorded by Svoronos. A poor specimen was published by Bellinger, *op. cit.* (above, note 33), pl. I, 1.

⁴⁵ Sv. 23.46–52.

No less important than this clarification of the late 3rd and early 2nd century bronze chronology is the insight into the working pattern of the Athenian mint provided by the Agora stoa deposits. The most curious phenomenon in the Agora deposits is the reoccurrence of the same three Fulminating Zeus varieties of Deposits I and II (star, wheat ear and cornucopiae)—and only these three—in the other Agora deposits through and including the deposits of 140 B.C. Table 4 summarizes the 2nd century Athenian contents of Deposits I–VIII. It will be noticed that of the 44 Fulminating

TABLE 4: SECOND CENTURY ATHENIAN COINS FROM THE AGORA STOAS

I: Construction fill of the Middle Stoa, ca. 180 B.C.

II: Hellenistic fill south of the Middle Stoa, ca. 180 B.C.

III: Hellenistic fill near the northwest corner of the Heliaia, ca. 140 B.C.

IV: Construction fill of the Stoa of Attalos, ca. 150-146 B.C.

V: Hoard from the Square Peristyle floor, ca. 185-146 B.C.

VI: Construction-fill of South Stoa II, ca. 140 B.C.

VII: Destruction debris of South Stoa I, ca. 140 B.C.

VIII: Uppermost floors of South Stoa I, ca. 140 B.C.

Zeus coins, every legible piece bears as symbol either a star, wheat ear or cornucopiae, varieties present in the Middle Stoa deposits and struck between ca. 196 and ca. 180 B.C. In fact, the only new Athenian types which appear in the later deposits are the Zeus/Fighting Athena issue, commonly found in rather worn condition in the Sullan hoards, 46 and the Artemis?/Amphora fraction, of uncertain date. Moreover, the Zeus/Fighting Athena types do not appear in any deposit earlier than 140 B.C., but occur twice in 140 contexts. The specimen in Deposit III is too damaged to determine wear, but the piece from Deposit VI (Pl. 76, No. 266) appears to have been struck

⁴⁶ Price, Num. Chron. (above, note 33), p. 29. Caramessini-Oeconomides and Kleiner, op. cit. (above, note 39), p. 151.

recently. The Zeus/Fighting Athena coins must have been issued between 146 and 140 B.C., which accounts for the relative wear of these coins in the hoards of 87 B.C.

The eight deposits from the Agora stoas thus attest to a period of some thirty-five years—between 180 B.C. at the latest and 146 at the earliest—when no new bronze coins were struck.⁴⁷ After an initial period of striking large and fractional-denomination bronzes at the end of the 3rd and the beginning of the 2nd centuries, the emission of bronze coins was suspended until 146–140 B.C. It seems that the Zeus-holding-thunderbolt and early Fulminating Zeus bronzes and the owl-on-prow or -thunderbolt and Cicada/Amphora fractions were issued in sufficient quantities before 180 B.C. to satisfy the small currency needs of Athens for a third of a century or longer.⁴⁸ In contrast to the continual emission of silver coins in the 2nd century, the Athenian mint struck bronze coins at irregular intervals, apparently only when new bronze coins were needed. Such a minting pattern (or lack of pattern) would fit the ever-changing monetary needs of an ancient, as well as a modern, society far better than the artificially even distribution of issues usually proposed by the modern numismatist.

A corollary result of this investigation of Athenian bronze coinage in the first half of the 2nd century is that one can now date all the issues found in the Sullan hoards not present in these Agora deposits as after *ca.* 140 B.C. This includes not only the remaining Fulminating Zeus varieties—amphora, two pilei, thyrsos, etc.—but the following important fractional denominations: Athena/Amphora, Athena/Two owls on thunderbolt, and Cicada/Owl.⁴⁹ A careful re-examination of the Sullan hoard material should permit a narrower dating of these bronze issues also, and supply an absolute as well as a relative chronology for all the Athenian bronzes of the second century B.C.⁵⁰

FRED S. KLEINER

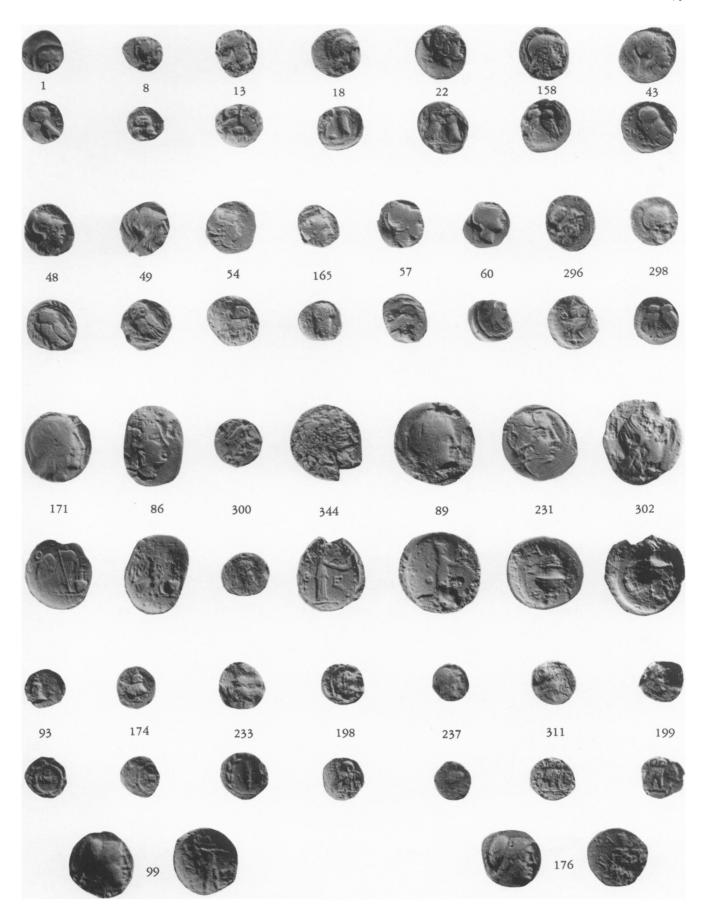

American School of Classical Studies Athenian Agora Excavations

⁴⁷ The only Fulminating Zeus bronze found in the Corinth deposits of 146 B.C. was a worn example of the wheat-ear-and-eagle variety already present in Middle Stoa Deposits I and II. Price, *Hesperia*, XXXVI, 1967, p. 362.

⁴⁸ J. H. Kroll has documented an even longer gap in Athenian bronze coinage between the Athena/Sphinx series of Augustus and the first Athenian Imperial types of the 2nd century after Christ ("The Eleusis Hoard of Athenian Imperial Coins and Some Deposits from the Athenian Agora," *Hesperia*, XLII, 1973, pp. 312–333).

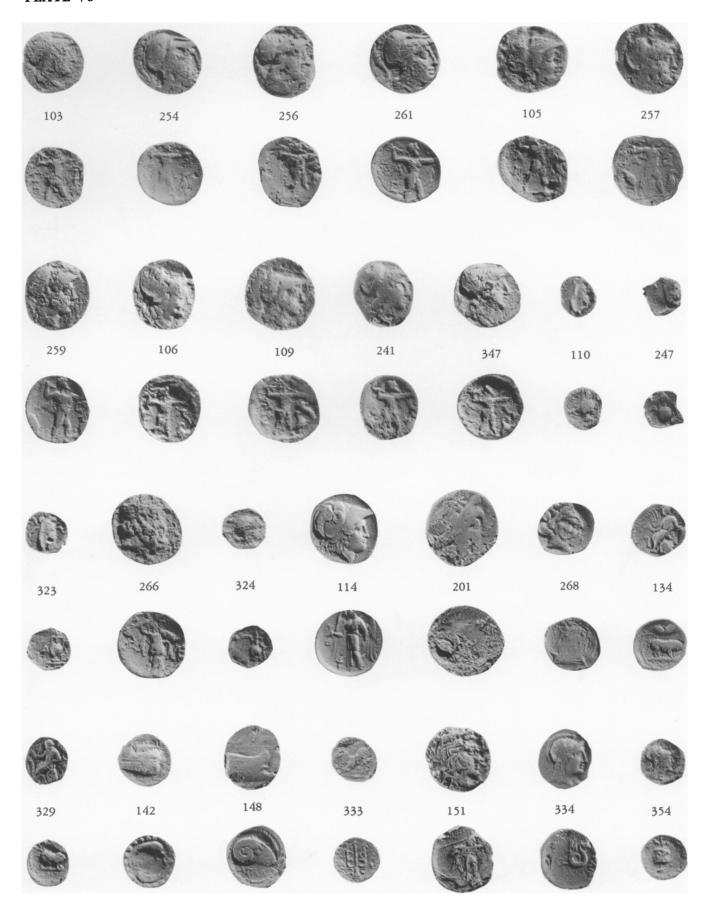

⁴⁹ Sv. 107.75-79, 24.60-68 and 107.50-54 respectively.
